Advanced MSBI

Requirements for data solutions

SUMMARY

This 1-day training program will allow BI analyst to better gather requirements from undecided clients.

This course will go over a methodology called Business Dimensional Modeling (BDM). This methodology, developed by TDWI, allows analysts to better understand the data needs of the users and translate them into actionable requirements.

DISCLAIMER

This course is for you if :

- Have done requirement gathering or any business analysis process in a BI environment

MODUS OPERANDI

This training program is an intensive, and immersive day of theory and workshops about how to gather requirements using artifacts from the Business Dimensional Modeling methodology. The course is lab oriented and focuses on applying the techniques learned during the class in fictional scenarios.

The students will finish the course with :

- An in-depth knowledge of the business dimensional modeling and how to apply it to the organization
- Business requirements and business analysis document templates
- A method to define business questions and refine them into a dimensional model
- A certificate of accomplishment

COURSE OUTLINE

Day 1 – The business dimensional modeling methodology

- The role of a Business Analyst in a BI team
- An introduction to modeling
- The problem with gathering requirements for data products
- The solution: business dimensional modeling
- Modeling business questions
- Refining business questions
- Extracting metrics and labels
- The business dimensional model
- Refining the requirements: mockups
- Finalizing requirements: architecture and technical documentation
- Passing the ball: functional requirements

At the end of this course, the students will be able to apply this proven methodology in their organization and adapt it according to its needs.
